

AIT580_ Assignment 11

Name: Leela Sai Charan Reddy Manchala

1)

Here in this visualization (15 Bad Data Visualization Examples , 2021)

i) In the Mexico City graph the last 23 toasts were represented using small graphic of toast and the same was done in the Johannesburg city graph, this is a distorted detail and for an avocado toast price per city, the designer illustrated 100 avocado toasts with one cup and then one-dollar bills. The representation is chaotic due to the different amount of avocado toasts consumed and the price of the toasts.

ii) The price was represented using one dollar note graphics which was unnecessary they could have simply increased the size of price which was given below.
